

ABSTRACT

An electronic pilot ignition with safety switch comprising a hollow body with a safety switch near center having a body and a pressing part, wherein the pressing part is placed freely onto the top of the body to move forward or backward; a brake bar
5 installed freely inside the pressing part to prevent the pressing part from moving forward, a brim of the hollow body locates corresponding to the connection of the safety switch, the brim blocks a pressing brim on the bottom of the pressing part to prevent the safety switch from being pushed down; while ignition, users have to move the brake bar to the blocking position and push the pressing part forward enabling the
10 pressing brim to move away from the brim of the hollow body first, then users can press down the safety switch to ignite the flame for safer and more convenient purpose.
